

Fluree for M&A Data Integration

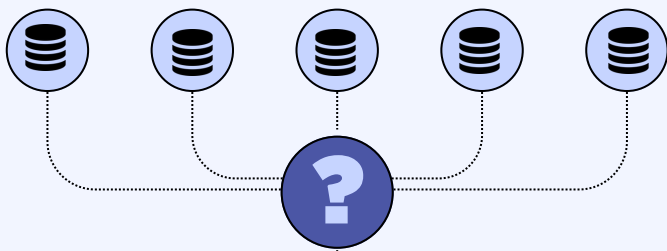

Companies that have grown through Mergers or Acquisitions often list data integration across respective systems as their #1 operational pain point. With Fluree Sense, organizations can discover, ingest, classify, de-duplicate, and clean disparate data with automation.

Customer Challenge

During a merger/acquisition, organizations must integrate key processes and workflows through data reconciliation. This may include customers, products, financial records, employee data, supply chain information and other IT systems, ensuring consistency and accuracy across all integrated entities.

However, a key problem that often arises during this integration is the challenge of managing and harmonizing disparate data sources. Each organization may have different data standards, formats, and systems, leading to inconsistencies and potential data integrity issues.

Without a robust data governance framework, these discrepancies can cause significant delays, increased costs, and even compromise the quality of decision-making processes.

What customers do we have in common?

How do our acquired products fit into our existing product taxonomy?

How do we reconcile our inventory and supply chain data?

What are the critical data that need to be synchronized for analytics /reporting?

The Solution

Ingest and **consolidate** target data across relevant data sources **into a single source of truth.**

Improve and **master** data quality through de-duplication and enrichment.

Automate data mastering through data quality rules and continuous machine learning

Fill in Gaps

Fluree classifies data against a data catalog, infers and populates missing critical data elements, and deduplicates records

Automate Data Quality

Fluree applies data quality rules to source systems, enabling business users to only review exceptions flagged by Fluree's workflow

Save into Semantic Format

Fluree applies universal, layered ontologies to data so that it can be found, access, integrated, and reused across the IT environment, regardless of its origin system and format.

"In the course of just 5 weeks, Fluree Sense had already integrated upwards of 80% of our converged product data environment, allowing us to focus on delivering immediate value post-acquisition" - VP Data Engineering (Client)

Impact

By addressing discrepancies and aligning systems, Fluree Sense can unlock new opportunities, create a unified customer experience, and achieve a competitive edge in the market during merger and acquisition activities.
